

HORUS Crypto + HORUS1 Marketplace

HORUS Strategic Execution Report

An early opportunity connected to a live platform, locked wallets, clear liquidity, and a disciplined execution plan.

Version

v1.5 - July 2026

HORUS1

<https://horus1.com>

Read this report from the beginning: HORUS is not just a token. It is an early-stage opportunity inside an operational ecosystem, with an early discount, initial allocation delivery, locked wallets, and a plan designed to reduce waste and build real platform utility.

Before reading the report

Why HORUS May Be a Different Early Opportunity

The strength of HORUS is not that it is merely a new token; it is that HORUS begins with an existing project, locked wallets, clear liquidity, and an execution plan designed to avoid waste from day one.

In many early projects, participants enter while waiting for the team to start from zero: no ready platform, no clear use case, insufficient wallet locks, and no practical path toward token utility.

HORUS was designed differently. The token is connected to the live HORUS1 platform. The first operational phase focuses on Egypt because the platform is ready in Arabic and traditional payment gateways are ready according to project data. The real users and operational results from this first market can then support the applications and the future use of HORUS Token in markets where laws allow it.

25%

Early Discount

A pricing advantage for presale participants before launch and platform-utility phases.

70%

Initial Delivery

70% of the presale HORUS Token allocation is delivered at launch under the approved distribution mechanism.

90D

Staged Follow-Up

The remaining allocation is distributed in stages over 90 days to reduce pressure and allow operational progress to be seen.

Why This Matters

Participants are not entering a project with open-ended and unclear movement. There is an early discount, a clear initial allocation delivery, and staged distribution, while the major project wallets, team wallet, and liquidity are locked under clear schedules.

Direct message: early participants enter before large-scale marketing, before mobile apps are promoted to the existing audience, before token payments are activated, and before discount campaigns designed to build real HORUS Token usage inside the platform.

Reducing operational risk

HORUS Does Not Ask for Blind Trust

No project is free of risk, but HORUS was designed to reduce operational risk as much as possible through clarity, wallet locks, a disciplined liquidity structure, and a ready platform.

Strength Factor	How It Reduces Risk
Existing platform	HORUS1 is not just an idea on paper; the platform is ready for operation, marketing, and improvement.
Locked team wallet	The team does not unlock its wallet early; the team wallet is fully locked for two years.
Locked major wallets	Community, ecosystem growth, treasury, and R&D wallets follow clear lock and release schedules.
Limited operational unlock	The early operational unlock comes only from the Marketing & Partnerships wallet and is released in stages during the first 90 days.
Locked liquidity	Initial liquidity is 100,000,000 HORUS + 3000 BNB, and LP tokens are locked for 3 years.
Liquidity-focused reserve	The strategic reserve is not for expenses; it is only for strengthening the market or adding liquidity when needed, and any new LP is locked for another 3 years.
Smart marketing decision	The team does not burn the budget on costly app-install campaigns from day one; it starts with the website and PWA, then launches apps to an existing audience.

The key point for the investor:

HORUS combines early entry, initial allocation delivery, locked wallets, a ready platform, locked liquidity, and an execution plan that starts from a market ready for operation before moving toward token usage in legally permitted markets.

This page does not represent a promise of return or a guaranteed price outcome. Its purpose is to show that the project design reduces operational risk and makes execution stages easier to track.

Table of Contents

What This Report Covers

00	Why HORUS may be a different early opportunity
01	Executive summary
02	HORUS Token: a token connected to an operational ecosystem
03	Token information and contract features
04	Wallet allocation and role of each wallet
05	Lock policy, liquidity, and strategic reserve
06	Why early entry may be different
07	Why HORUS can be evaluated clearly
08	Execution plan: Egypt first, then apps, then token usage
09	The three operational phases
10	Revenue model and reinvestment for expansion
11	Tracking indicators and transparency
12	Important note and official links

The short idea: HORUS starts from an existing platform, uses phase one to operate strongly in Egypt, launches apps after an audience exists, then activates HORUS Token in legally permitted markets through real offers and discounts.

01 - Executive Summary

HORUS Is Not a Delayed Idea; It Starts From a Live Platform

HORUS Token was created to be part of a real operational ecosystem that begins with HORUS1, a live classified marketplace designed to serve broad daily needs for individuals and merchants.

HORUS is not designed around trading as the goal of the project, and the HORUS ecosystem does not depend on trading to build its value. HORUS derives its value direction from being connected to an operational project that can run and expand.

1B**Fixed Supply**

1,000,000,000 HORUS

2Y**Team Wallet Lock**

Fully locked for two years

3Y**Liquidity Lock**

LP locked for three years

Message to Participants

Participants are not entering a token disconnected from reality. They are entering an early stage of an ecosystem with a live platform, declared wallets, clear lock schedules, and an execution plan based on marketing and real platform usage.

Live Platform

Declared Wallets

Long Locks

Working PWA

Optional payment where legally permitted

02 - Token Idea

HORUS Token - Connected to a Real Operational Ecosystem

HORUS Token was created to be part of a real operational ecosystem, not merely a digital token without a clear project.

The ecosystem begins with HORUS1, a classified marketplace serving practical daily needs: posting ads, selling products, buying products, listing services, reaching customers, and using promotional services inside the platform.

The Project Idea in Brief

- A broad-use classified marketplace.
- Free services to attract the largest number of users.
- Optional paid services for stronger visibility.
- Merchant packages and advertiser benefits.
- HORUS Token usage inside platform services where laws allow it.
- Rewards and discounts that make token usage useful, not mandatory.

Execution and use of funds

The detailed operational plan is presented in a separate file titled: **HORUS 90-Day Execution & Use of Funds Plan.**

03 - Token Information

Official Data and Contract Features

Item	Details
Project Name	HORUS Crypto
Token Name	HORUS Token
Symbol	HORUS
Network	BNB Smart Chain
Standard	BEP-20 / ERC20-compatible
Total Supply	1,000,000,000 HORUS
Decimals	18
Supply Type	Fixed
Supply Creation	Created once at contract deployment only
Contract Address	0xaa235398f544F624a663d2B76f801177eE4E678A
BscScan	https://bscscan.com/token/0xaa235398f544F624a663d2B76f801177eE4E678A
HORUS Crypto Website	https://horuscrypto.com
HORUS1 Official Website	https://horus1.com
Official Email	info@horuscrypto.com

HORUS Token Contract Features

- Fixed total supply.
- No new tokens can be minted after deployment.
- No buy, sell, or transfer taxes.
- No blacklist or whitelist.
- No contract pause function.
- No proxy or hidden upgradeability.
- No wallet or transaction limits.
- Built on the OpenZeppelin ERC20 model.

04 - Wallets

Wallet Allocation and Role of Each Wallet

The total HORUS supply is **1,000,000,000 HORUS**. The supply is divided into clear wallets, each with a specific role inside the project.

Wallet	Share	Tokens	Role
Liquidity	10%	100,000,000	Creates initial liquidity at launch with LP tokens locked.
Community Rewards	20%	200,000,000	Rewards, incentive programs, and educational campaigns.
Ecosystem Growth	20%	200,000,000	Partnerships, integrations, and long-term growth tools.
Foundation Treasury	22%	220,000,000	Operational continuity, legal infrastructure, administration, and expansion.
Research & Development	10%	100,000,000	Development, testing, security, applications, and AI tools.
Marketing & Partnerships	10%	100,000,000	Launch campaigns, user acquisition, merchant acquisition, and partnerships.
Strategic Reserve	5%	50,000,000	Reserved to strengthen the market and add liquidity when needed.
Team	3%	30,000,000	Long-term team incentive, fully locked for two years.

05 - Lock Policy

Wallet Lock Policy and Gradual Unlocks

Wallet	Share	Tokens	Lock and Release Policy
Liquidity	10%	100,000,000	Used fully at launch against 3000 BNB. LP tokens locked for 3 years.
Community Rewards	20%	200,000,000	100% locked for 18 months, then gradual release over 48 months.
Ecosystem Growth	20%	200,000,000	100% locked for 30 months, then gradual release over 60 months.
Foundation Treasury	22%	220,000,000	100% locked for 18 months, then controlled gradual release.
R&D	10%	100,000,000	100% locked for 18 months, then gradual release according to development needs.
Marketing & Partnerships	10%	100,000,000	Only 30% is released during the first 90 days; the rest is locked and then gradually released over 24 months.
Strategic Reserve	5%	50,000,000	50% locked for 9 months and 50% locked for 12 months. Used only to support or add liquidity when needed.
Team	3%	30,000,000	100% locked for two full years.

Liquidity and Strategic Reserve

Initial liquidity is planned as **100,000,000 HORUS + 3000 BNB**, with LP tokens locked for **3 years**.

The strategic reserve is not for daily expenses. It is reserved to strengthen the market or add new liquidity when demand grows. Any new liquidity added from the reserve will have its LP tokens locked for **an additional 3 years from the date of liquidity addition**.

06 - Early Entry

Why Early Entry in HORUS May Be Different

Early participants enter before large-scale marketing, before token payments are activated, and before platform usage expands.

25%**Early Discount**

A pricing advantage for presale participants.

90D**Trackable Phase**

The first 90 days can be tracked through numbers.

6M+**Token Usage Campaign**

HORUS Token usage campaigns last at least 6 months.

2Y**Team Locked**

The team wallet does not unlock early.

Phase Two Creates a Timing Advantage

After the basic operations are prepared, HORUS Token can be activated inside the platform in countries where laws allow it, using discounts and offers that encourage users and merchants to pay with the token.

This is not a promise of a specific return, but it places early participants before the active utility phase of the token inside real services.

Summary: early discount + live platform + locked wallets + real platform utility + offers for at least 6 months = an early entry advantage without guaranteed price promises.

07 - Team and Execution Clarity

Why HORUS Can Be Evaluated Clearly From the Start

HORUS does not ask for blind trust. The project presents a published contract, defined wallets, lock schedules, a live platform, and an execution plan that can be tracked.

The Team Locked Its Wallet First

The team wallet is fully locked for two years. This means the team does not begin by unlocking its own allocation; it begins by working on operations, marketing, and real usage.

A Programming and Marketing Team That Avoids Budget Waste

One of HORUS's strengths is that the team works in programming, website development, mobile apps, digital marketing, and AI. Therefore, it does not start by wasting money on early app-install campaigns. It builds a real audience first, then launches the apps to that audience.

- Faster and lower-cost internal development.

- Continuous improvements based on market data.

- Ability to prepare apps in the background.

- A marketing decision that protects the budget from early waste.

08 - Execution Plan

Egypt First, Then Apps, Then Token Utility

Phase one does not require building the platform from zero. The platform is ready in Arabic, and payment gateways in Egypt are ready according to project data. Therefore, the first operational release is enough to launch a complete campaign in the Egyptian market.

Phase One Full Egypt Launch

Full focus on Egypt: marketing, user and merchant acquisition, free ads, optional paid services, and platform experience improvement.

Phase Two Apps and Token Market

Launch Android and iOS after they have been prepared in the background, promote them inside the platform, and prepare the selected market or markets for HORUS Token payments where legally permitted.

Phase Three Support Token Usage

Strong campaigns and discounts that encourage the use of HORUS Token inside platform services for at least 6 months, with tracking of payments and usage.

Principle: the project does not open everything at once and does not burn the budget on apps from day one. It starts with the ready market, builds an audience, then launches the apps and token utility at the right time.

09 - Phase One

Full Egypt Launch With the First Operational Release

Egypt is the starting point because it is a large, popular, dense market with suitable marketing costs. Having a project entity inside Egypt and ready payment gateways gives the project a clear operational start.

What Will Be Executed?

- A complete marketing campaign inside Egypt.
- Free ads to drive platform spread.
- Improving ad posting, search, and filters.
- Using PWA so users can install the site as an app from the browser.
- User, merchant, and advertiser acquisition.
- Optional paid services activation.
- Completing and preparing apps in the background.
- Measuring results before expanding spend.

Why Not Launch Apps From Day One?

Because app-install campaigns can consume a large budget before a real audience exists. According to project estimates, one million paid installs may cost around **\$220,000**. Therefore, HORUS1 starts with the website and PWA first, then launches the apps to an audience already inside the platform.

10 - Phases Two and Three

Applications, Token Market, and Operational Offers

Phase Two - Launch Apps and Activate the Token Market

After building an audience in Egypt and preparing the apps in the background, Android and iOS applications are launched and promoted inside HORUS1 itself, reducing the cost of installs because the audience already exists.

In parallel, the suitable country or countries are selected for enabling HORUS Token payments inside the platform, provided that laws allow it.

Phase Three - Support HORUS Token Usage

After token payment preparation, usage support begins through strong discounts and offers for merchants and users for at least 6 months.

Use Case	Benefit for User or Merchant
Featured Ads	Discount when paying with HORUS Token.
Pinned Ads	Stronger visibility at lower cost when paying with the token.
Merchant Packages	Special offers to encourage merchants to use the token.
Usage Campaigns	Promotion for at least 6 months to drive real platform utility.

The goal is not to open many markets without focus. The goal is to select a suitable market for token payment, then support it with clear marketing and offers that lead to real platform usage.

11 - Revenue and Continuity

How the Platform Continues After Operational Funding Ends

After phase three ends, the project goal is not permanent reliance on funding. The goal is for revenue from optional paid services to begin supporting operations and expansion.

Revenue Sources Inside HORUS1

- Featured ads.

- Pinned ads.

- Ad boosting.

- Merchant packages.

- Merchant pages and services.

- Promotional offers and services inside the platform.

Redirecting Revenue to Expansion

Operating revenue generated through traditional payment methods such as PayPal, card payments, and local payment channels can be directed toward app promotion and expansion into future markets.

Egypt is not merely an operational base; it is the first market selected based on market, cost, and audience study. The first operational budget is designed to target more than 500,000 real users within the first two months, helping the platform generate revenue from optional services that can be redirected to app promotion and future market expansion.

This strategy makes the project more sustainable: a first market that operates, operating revenue that helps expansion, and future markets selected carefully.

12 - Tracking and Transparency

What Can Participants Track?

To avoid relying on words alone, progress is measured through clear indicators.

Indicator	What It Shows
Number of users	Platform growth.
Number of ads	Market activity inside HORUS1.
Number of merchants	Platform acceptance by serious advertisers.
Paid ads	Whether the revenue model can work.
PWA installs	Success of the web-app strategy.
Application downloads	Results from launching Android and iOS to an existing audience.
Token payment transactions	Real usage strength of HORUS Token inside the platform.
Wallet and liquidity status	Commitment to lock and release schedules.

The goal is for participants to see progress in numbers: users, ads, merchants, paid services, apps, and token usage where legally permitted.

13 - Important Note and Official Links

Important Note for Participants

HORUS Token was designed to be part of a real operational ecosystem that begins with HORUS1.

The project does not promise a fixed return or a guaranteed price outcome. The strength of HORUS comes from building real token usage inside a live platform, with declared wallets, clear lock schedules, locked liquidity, and an execution plan that can be tracked.

Any participation should be based on understanding the project, reviewing official data, following the contract and wallets, and reading the files related to execution and use of funds.

Final Summary

HORUS starts from a real project, uses funds in stages, avoids budget waste, locks wallets, builds an audience first, and then turns HORUS Token into a utility tool inside real platform services where laws allow it.
